MEDICAL DEMAND REQUIRES ATEK PLASTICS INVESTMENT

KERRVILLE, TEXAS-- ATEK Plastics, an outsource medical device manufacturer, invests in two new cutting-edge Toshiba 500-ton electric injection molding machines equipped with new robots, vision systems and RJG eDarts to keep up with the increased medical demand.

“This investment positions us to meet the needs of our strategic growth plans for the precision injection molded medical device component manufacturing for new and existing customers. In addition, the new machines have been strategically placed in our facility to accommodate swim lanes to maximize manufacturing efficiencies,” said Tom Houdeshell, President of ATEK Plastics.

ATEK Plastics, an ISO 13485 medical certified injection molder, was awarded multiple new projects from large OEM’s recently in the surgical and stem cell reclaim markets along with new projects from their existing medical customer base.

With the company’s continuous improvement philosophy and increasing medical growth over the past year, ATEK’s management team saw the investment in new equipment essential. “Utilizing new technology to benefit our customers bottom line gives us the ability to grow together, we call this deep partnering” explained Houdeshell.

About ATEK Plastics

ATEK Plastics is a global manufacturing leader that provides cost effective components on-time to companies demanding quality and expertise. Their state of the art facility houses a full service tool room, quality lab and a technology driven molding floor with portable clean room capabilities. Staffed with experienced engineering and management, ATEK can make your design a reality. No compromise, the A-Team will meet or exceed your requirements every time.
